

Hazardous Material Emergency Response Plan - Form 1: Spill Assessment

A Spill Assessment is to be completed any time there is a chemical spill greater than 1 gal at a PCC facility and is to be completed by parties affected by the spill which can include a representative of the department where the spill occurred, FMS and EH&S, and DPS.

Depending on the size and nature of the spill/release, it may be necessary to have the spill cleaned up by a third party HAZMAT Team. This assessment is designed to help determine that need.

Spill Assessment completed by (one or more):

Public Safety representative		Date	
Department representative		Date	
FMS or EH&S representative		Date	

Section 1: Location and Chemical/Substance Identification

Where did the spill take place?					
Campus/Center		Building		Room	
The Chemical/Substance is a: Solid _____ Liquid _____					
Is the chemical/substance identification known? Yes _____ No _____					
What is the estimated volume of the spill/release?					

If the chemical identification is unknown, spill clean-up operations must be handled by a third party HAZMAT Team. Continue to Section 3: Assessment.

Section 2: Chemical Hazards and Required Response Material

Consult the chemical's Safety Data Sheet (SDS) for the following hazard information. Please attach a copy of the SDS to this assessment.

What hazards are associated with this chemical/substance? Please circle all that apply.

 Oxidizers	 Acute Toxicity	 Aquatic Toxicity	 Gas Under Pressure
 Explosive Self-Reactive Organic Peroxide	 Irritant Skin Sensitizer Narcotic Effects Respiratory Tract Irritant	 Flammables Pyrophoric Self-heating Flammable Gas	 Skin Corrosion/Burns Eye Damage Corrosive to Metals
 Carcinogen Mutagenicity Reproductive Toxin Respiratory Sensitizer Aspiration Hazard	Other Please specify:		None

If corrosive, what is the concentration and pH of the chemical/substance? _____

Does the chemical/substance have an OSHA permissible exposure limit (PEL)?

Yes No

If yes, what is the listed level? _____

The OSHA PEL will be used to help determine the level of PPE needed for the clean-up operations.

What PPE is needed for handling the chemical/substance?

If the SDS lists specific types of PPE, please detail those specifics.

Gloves	
Face/Eye Protection	
Respiratory Protection / Additional Ventilation	
Specific Footwear	

Will the chemical need a specific container? (Ex. - glass, metal, plastic) Yes No

If yes, what type of container? _____

Are there other hazards in the spill area/control zone?

(Ex. - noise, broken glass, compromised equipment)

Section 3: Assessment

Is the chemical identity unknown? Yes No

Is the chemical a gas under pressure, explosive, pyrophoric, water reactive, self-heating, or self-reactive? Yes No

Is the pH 1-3 or 12-14? Yes No

Is the chemical/substance a simple asphyxiant? Yes No

Is the spill entering the ground or waterways (Stormwater drain)? Yes No

If the answer to any of these is yes, spill clean-up operations must be handled by a third party HAZMAT Team.

If there are any doubts or questions about PCC's ability to respond to a spill, please contact EH&S.
