Environmental Health \& Safety<br>District Water Quality Sampling

## TESTING METHODS

Testing Method: EPA 200.8

Samples were collected in general accordance with the EPA's Lead in Drinking Water in Schools and Non-Residential Buildings, and Lead \& Copper Rule Standards. All samples were analyzed at laboratories accredited by the Oregon Environmental Laboratory Accreditation Program (ORELAP) for testing under the Safe Drinking Water Act

Sampling methodology and the interpretation of laboratory results were based on the EPA guidance document entitled; 3Ts for Reducing Lead in Drinking Water in Schools.
First draw samples were collected following the Test Method: EPA 200 procedure.
Laboratory analysis indicated that one (2) water sample collected contained lead at concentrations that were above the EPA action level of 20 ppb . This was: Building $21^{\text {st }}$ floor Women's Restroom near Room 104 sink at 31.2 ppb and Building 7 $2^{\text {nd }}$ floor Women's Restroom near Room 236 sink at 22.9 ppb .
