

Oct 9, 2023

Agenda:

Attendees

Heather Coleman, Evelyn Prater, Ben Kumler, Brett Schaerer, Spencer Corbin Lawson, Ken Friedrich, Mike Mackel, Steve Ballew, Mari Almquist, Linda Fergusson-Kolmes

Online and in person training debrief

Check in with Physical Science teams safety training modality

Value of in-person training

- Introduce new things
- Time efficient for limiting questions
- Getting information to all instructors all at once
- Identifying gaps that need to be addressed
- Maybe site and discipline specific as a need

Online training

- It will all be updated and reviewed over the next year.
- Trying to make the training more engaging
 - E.g. spill response training, more scenarios
- Refresher trainings for waste disposal and communications
 - Like the brevity
- Blood borne pathogen was too much repetitive and not engaging

Hybrid approach

Some value to in person and online mixes

Hard to get everyone together

Safety walkthrough online

Brett project with Michael Annus VR safety pilot video

Do all teams feel comfortable with the level of training provided

Update to Procedures being worked on

Eyewash procedure is ready.

Website is ready for shared drive links

Update on Risk Services Hiring (updates if staff in place to do so)

Not hired someone yet

Rob Gabris is the Risk Manager on a casual basis

- HEP B vaccination billing FYI
 - Risk handles that (Nikki or Kelly)
- Incident reporting terminology
 - EH&S will cover with Risk when a new manager is hired
 - All incidents are shared. EH&S only takes responsibility for employee incidents. For students that is managed by Risk
 - Incident versus accident etc

Update on EH&S videos (new ones)

- May need some images
- Trainings need updating trying to make it more PCC centric instead of generic
- May be reaching out to the different departments
- Have an instructional designer on the EH&S team

Update on Brett's project

Reminders:

- Winter term lab inspections
 - Chemical inventories will be a focus
 - Evelyn has to mark chemicals as inactive
- Check the MSDS inventory for removals

Spring Chemical Hygiene

- Set meeting date
- IST gathering possible for focused training?
 - Are there any new requirements that need to be addressed?
 - So probably not
- Can we have a Fire Science demonstration?
 - Some value for the people would use the extinguisher
 - Want to make sure that it did not obligate people
