

Here are comments by last year's students about the class.

What did you like about the class? What did you not like about the class?

I liked being able to work  
in a classroom with others.  
I appreciated the breaks where  
we would walk around.  
It definitely was a lot to do  
in one week, but is do-able.

What did you like about the class? What did you not like about the class?

I liked that you go on your own speed and it kind of refreshes your brain with math you already know but can't put a finger on it.

I don't have any dislikes on the class.

3) What did you like about the class? What did you not like about the class?

I'm not a big fan of mostly online classes, but ALEKS was straightforward. Meeting in person was great, 20 hours felt steep, but now that it's behind me I can't say it wasn't useful. I worked myself to the bone that first week, but that's to do with coming right off summer break. If the courseload wasn't as intense it wouldn't have the same impact. I can't imagine taking it alongside any other classes, but thankfully that wasn't a problem, and I have a sense very few classes ran that week, so most folks would find themselves in the same camp.

1) Do you feel that this class was beneficial to you?

Seeing as it's been a long summer, and this marks my first year of college, I'm glad I enrolled in this class. The transition from summer to school had me worried, adjusting to routine is never easy, especially when it's altogether unknown. My math was rather rusty, this class offered a preview of what to expect in class while posing a chance to prepare. I was able to ease into the schoolyear with far less stress and come out the better for it.

1) Do you feel that this class was beneficial to you?

I feel like the class was very beneficial to me and the starting of my math class

2) Would you recommend this class to other students?

I would highly recommend this class to my peers

3) What did you like about the class? What did you not like about the class?

I thoroughly enjoyed this class not only because it allowed me to be brought back into math without throwing me straight in the deep end but it allowed me to meet some peers. There was not a lot of face to face with others which I think would have the class even better, but I suppose that was not the point of the class.

What did you like about the class? What did you not like about the class?

I liked that it set aside a real time for me to just sit down and study and do math without any distractions. It feels very grueling sometimes, which is what I don't like, but it was definitely helpful. I don't really understand how I am supposed to get 20 hours, however, when I work and have extracurriculars after

school still since my actual term hasn't started yet and I have already exceeded the goal in less than 10 hours. Other than that, it was very beneficial to me.
